

**TI-908**

**Prepared:** November 17, 2000

**Short Description:**

Class III Asbestos Work.

**Inquiry:**

On November 14, 2000, the caller requested information regarding Class III asbestos work. The caller specifically requested assistance in providing wording or specifications that could be used in describing Class III asbestos work. Alternatively, the caller inquired whether specifications or a group of specifications existed that GSA uses for Class III asbestos work.

The caller explained that this information would relate to the need to install a new suspended ceiling in a building area where the current ceiling is composed of asbestos-containing spray-on fireproofing on the underside of the steel floor deck above. The caller further indicated that the asbestos may be disturbed during the removal of the existing ceiling and support system, and during the installation of the new hangers and grid for the new ceiling system.

**Response:**

Upon consultation with GSA, it was determined that someone within GSA has previously developed something similar to this in the past, and an e-mail out to the 'environmental points of contact' would be a good way in which to obtain this information.

The following is a list of the points of contact:
